

SCENTRY LARGE PLASTIC DELTA TRAP INSTRUCTIONS

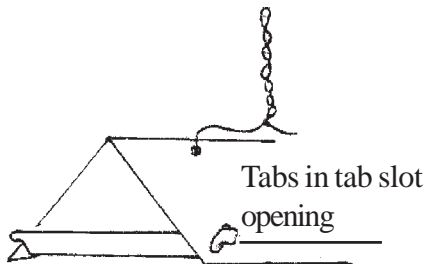

1. Untwist the wire hanger from around the body of the trap and straighten.

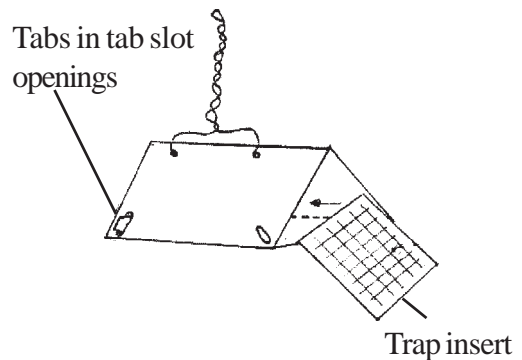

2. Open trap body, pushing down on the middle of the bottom until it lays flat and the trap body forms a triangle. Remove all four of the perforated tab slot openings located in each corner of the trap.

3. Fold the end of one side of the bottom of the trap upwards following the crease. Place the tabs on each side of the turned up portion of the bottom into the two tab openings located on each side of the trap body.

4. Slip the sticky insert into the trap body from the side of the trap that the bottom still hasn't been turned up on. After insert is in place, turn up the creased area on this end and place the end tabs into the tab openings on the trap body as was done on the other end of trap.

5. Place lure in trap and hang by hanger.
